

A Deployment failure: future data revise the past

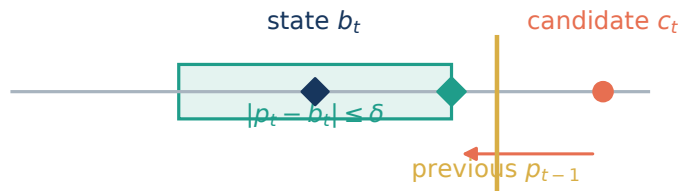

Online requirement: the prefix already emitted at t must remain invariant

B Prefix-causal state and learned proposal

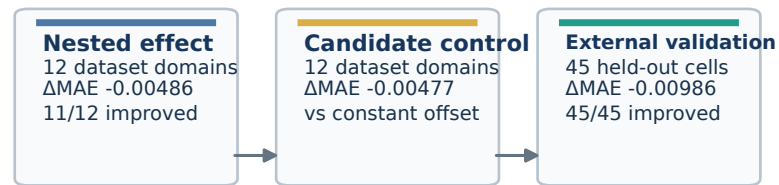

$$b_t = b_{t-1} + \alpha \min(r_t - b_{t-1}, 0) \text{ uses only the observed prefix}$$

C Recursive feasible set and exact harm-budget interval

$$p_t = \Pi_{[\max(0, b_t - \delta), \min(1.3, b_t + \delta, p_{t-1})]}(c_t)$$

D Evidence chain: distinct questions, distinct units

All three 95% intervals excluded zero; all deterministic certificates held
